Sounds like a mission for Andrew if he isn't otherwise tasked?

Subject: FW: TASC and WLL information repository

The CAG has expressed frustration at the current state of the Administrative Record at the site repository and the ability to access all site documents.

One thing that has been brought to our attention is that the current AR seems to be split among two different locations. It would be good if we could identify missing documents from the AR supply those to the listed repository.

Taking a look at Terrie's email below, this was recently done for another site by the TASC contractor, but at a cost of \$16,000. Terrie thinks that this kind of indexing could potentially be done by an intern, which we could consider if we bring any on board.

Any thoughts?

Subject: TASC and WLL information repository

Hi Ben,

I talked to our TASC PM, Krissy Russell-Hedstrom, yesterday about the WLL information repository and frustration of the CAG about getting electronic copies of documents. She pointed out that in EPA R6, TASC recently assisted a community group in New Mexico because they were very frustrated at not having a list or copies of all documents related to the Homestake Mining Superfund site. Krissy spent 2 days in Santa Fe to inventory the State's archives and make an Excel spreadsheet list all the documents in the archive. She then checked out and copied all the documents (about 6000 pages). She had the copied pages auto-scanned by a local print shop, and CDs were made of all the documents for the community group and agencies. This work cost about \$16K. I expect that an EPA summer intern can accomplish this work for less cost, but if you need another option, you may want to ask Freya about using TASC. Making all the documents available to the CAG is really important to them.

Thanks.

Terrie
